Patent No. 6221630
GENERAL INFORMATION
APPLICANT: Hopper, James E
TITLE OF INVENTION: Regulated High-level Production of Polypeptides in
TITLE OF INVENTION: Yeast
TITLE OF INVENTION: Yeast
CURRENT PAPLICATION NUMBER: US/09/275,680
CURRENT FILING DATE: 1999-03-24
NUMBER OF SEQ ID NOS: 22
SOFTWARE: Patentin Ver. 2.0
SEQ ID NO 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Patent No. 5248600

GENERAL INFORMATION:

APPLICANT: Topal, Michael D.

APPLICANT: Topal, Michael D.

APPLICANT: Conrad, Michael D.

APPLICANT: Conrad, Michael D.

TITLE OF INVENTION: Method of Cleaving DNA
NUMBER OF SEQUENCES: 8

CORRESPONDENCE B.

ADDRESSER: Kenneth D. Sibley; Bell, Seltzer, Park and Gibson CIT: Charlotte
STREET: Post Office Drawer 34009

CONTRY: U.S.A.

ZIP: Z8234

COMPUTER READABLE FORM:

MEDTUM TYPE: Floppy disk

COMPUTER: IBM PC Compatible

OFFIANTION SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.24

CURRENT APPLICATION DATE:

FILING DATE: 19901214

CLASSIFICATION NUMBER: 31,665

RESTSTRATION NU
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 7, Application US/08486648

Patent No. 5851832

GENERAL INFORMATION:
APPLICANT: Reynolds, Brent A.
APPLICANT: Hammang, Joseph P.
APPLICANT: Baetge, Edward E.
TITLE OF INVENTION: Use of Multipotent Neural Stem Cells and their Progeny
NUMBER OF SEQUENCES:
ADDRESSEE: Flehr, Hobbach, Test, Albritton
ADDRESSEE: Flehr, Hobbach, Test, Albritton

i GENERAL INFORMATION:
APPLICANT: S2Y, Moshe
APPLICANT: S2Y, Moshe
APPLICANT: S2Y, Moshe
APPLICANT: Von Hofe, Eric
TITLE OF INVENTION: Tumorigenicity-Inhibiting Activity
NUMBER OF EQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSE: Banner & Allegretti, Ltd.
STREE: 10 S. Wacker
CITY: Chicago
STATE: 10 S. Wacker
CITY: Chicago
STATE: 10 S. Wacker
COMPUTER RADDABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWATING SYSTEM: PC-DOS/MS-DOS
SOFTWATING SYSTEM: PC-DOS/MS-DOS
SOFTWATING SYSTEM: PC-DOS/MS-DOS
SOFTWATING SYSTEM: PC-DOS/MS-DOS
SOFTWATION DATE: UND PT-D-S-DOS
SOFTWATION NUMBER: 31, 1995
CLASSIFICATION: NUMBER: 37, 142
REFERENCE/DOCKET NUMBER: 33, 1027-B
TELECOMMUNICATION INFORMATION:
COMPUTER READABLES

ZIP: 14203-2391

COMPUTER READABLES

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 US-98-486-307-8

Sequence 8, Application US/08486307

Patent No. 5980885

GENERAL INFORMATION:

APPLICANT: Weiss, Samuel

APPLICANT: Reynolds, Brent A.

APPLICANT: Baeege, Edward E.

TITLE OF INVENTION: In Vitro and In Vivo

TITLE OF INVENTION: Proliferation and Use of Multipotent

TITLE OF INVENTION: Project Sequence of TITLE OF INVENTION: Progeny

NUMBER OF SEQUENCES: 8

CORRESPONDENCE ADDRESS:

ADDRESSEE: Retrict Hobbach, Test, Albritton

ADDRESSEE: Pleart, Hobbach, Test, Albritton

ADDRESSEE: Pleart, Hobbach, Test, Albritton

ADDRESSEE: Pleart, Hobbach, Test, Albritton

ADDRESSEE: Pleart Hobbach, Test, Albritton

COMPUTRY: On Inted States

ZIP: 94111-4187

COMPUTER: ISW PC Compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.30

Patent No. 6071889

GENERAL INFORMATION:
APPLICANT: Weiss, Samuel
APPLICANT: Reynolds, Brent A.
APPLICANT: Reynolds, Brent A.
APPLICANT: Baetge Edward E.
ITILE OF INVENTION: In Vitro and In Vivo
TITLE OF INVENTION: Proliferation and Use of Multipotent
TITLE OF INVENTION: Neural Stem Cells and their Progeny
NUMBER OF SEQUENCES. 8
CORRESPONDENCE ADDRESS:
ADDRESSEE: Flehr, Hobbach, Test, Albritton
APPLICANT: Energian Colliformia
COUNTRY: United States
STREET: Four Embarcadero Center, Suite 3400
CITY: San Francisco
STREET: Califormia
COUNTRY: United States
STREET: Fleppy disk
COMPUTER: IBM PC compatible
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
CURRATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PatentIn Release #1.0, Version #1.30
FILING DATE: O7-UNN-1995
              PatentIn Release #1.0, Version #1.30
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
0.8%; Score 13.2; DB 1;
Best Local Similarity 83.3%; Pred. No. 2.2e+02;
Matches 15; Conservative 0; Mismatches 3;
                                                                                                                                                                                                                                   A-61105-6/DJB/JPB
                          CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/479,795
FILING DATE: 07-UN-1995
CLASSIFICATION: 435
ATTORNEY/AGENT INFORMATION:
NAME: Brunelle, Jan P.
REGISTRATION NUMBER: 35.081
REFERENCE/DOCKET NUMBER: A-61105-6/D.
TELECOMUNICATION INFORMATION:
TELEPHONE: (415) 781-1989
TELEFAX: (415) 398-3249
ITELERAX: 910 277299
INFORMATION FOR SEQ ID NO: 7:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 278

US-08-484-406-8

Sequence 8, 294346

Patent No. 6294346

Patent No. 6294346

Patent No. 6294346

PAPLICANT: Weiss, Samuel

APPLICANT: Reynolds, Brent A.

APPLICANT: Reynolds, Brent A.

APPLICANT: Bacego, Edward B.

TITLE OF INVENTION: Use of Multipotent Neural Stem Cells and their Progeny NUMBER OF SEQUENCES:

NUMBER OF SEQUENCES:

ADDRESSEE: Flebr, Hobbach, Test, Albritton

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 288

US-08-486-313-8

is Sequence 8, Application US/08486313

is Patent No. 6497872

is Patent No. 6497872

is GENERAL INFORMATION:

APPLICANT: Reynolds, Brent A. APPLICANT: Beetge, Edward E. APPLICANT: Beetge, Edward E.

i APPLICANT: Beetge, Edward E.

i TITLE OF INVENTION: In Vitro and In Vivo Proliferation

TITLE OF INVENTION: Progeny

NUMBER OF SEQUENCES: 8

CORRESPONDENCE ADDRESS:

ADDRESSEE: Flehr, Hobbach, Test, Albritton

Sequence 15, Application US/08281940
| Patent No. 5589330
| GENERAL INFORMATION:
| APPLICANT: SHUBANTON:
| TITLE OF INVENTION: METHOD FOR MULTIPLE ALLELE-SPECIFIC TITLE OF INVENTION: DISEASE ANALYSIS
| TITLE OF INVENTION: DARBY P.C. |
| TITLE OF INVENTION: DARBY P.C. 
               RESULT 304
US-08-064-400B-14
US-08-064-400B-14
| Sequence 14, Application US/08064400B
| Patent No. 5559028
| GENERAL INFORMATION:
| TITLE OF INVENTION: Regulation of Antigen Presentation
| NUMBER OF SEQUENCE:
| NUMBER OF SEQUENCES:
| ADDRESSEE: Kevin M. Farrell, P.C.
| STREET: P.O. Box 999
| CITY: York Harbor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0.8%; Score 12.8; DB 1; Length 17;

SOFTWARE: PatentIn Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/181,664
FILING DATE: JANUARY 14, 1994
CLASSIFICATION 14, 1994
CLASSIFICATION WHERE: DA.D. John R.
REGISTRATION NUMBER: 13,678
REPERANZY/CERY NUMBER: PD-3055
TELEPHONE: (619) 455-5100
TELEPHONE: (619) 455-5100
TELEPHONE: (619) 455-5100
TELEPHONE: (619) 455-5100
TELEPHONE: GARACTERISTICS:
LENGTH: 16 base pairs
TYPE: nucleic acid
STRANDEDNESS: single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1417 CGCTCCGGGTGCGGGG 1432

US-08-710-134-15/c
Patent No. 5834181
GENERAL INDORMATION:
FILLE OF INVENTION: HIGH THROUGHPUT SCREENING METHOD FOR TITLE OF INVENTION: SEQUENCES OR GENETIC ALTERATIONS IN NUCLEIC ACIDS NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSES: Genzyme Corporation
STREET: One Mountain Road
CITY: Framingham
STRATE: Massachusetts
COUNTRY: USA
ZIP: 01701
COMPUTER: IBM FC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: BA FEADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: 18 Floppy disk
COMPUTER: 18 Floppy disk
COMPUTER: 18-SEP-1996
CTRRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/710,134
FILING DATE: 13-SEP-1996
CLASSIFICATION: WUMBER: 37,315
REGISTRATION NUMBER: 37,315
REGISTRATION NUMBER: 163-8.1
TELECOMMUNICATION INFORMATION:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0.8%; Score 12.8; DB 1; Length 17; 75.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   RESULT 319
US-08-998-099-32/C

i Sequence 32, Application US/08998099A

i Patent No. 6103800

i GENERAL INFORMATION:

i APPLICANT: JARVIS. THALE

i APPLICANT: STINCHCOMB, DAN T.

i TITLE OF INVENTION: ENZYMATIC NUCLEIC ACID TREATMENT OF DISEASES

i TITLE OF INVENTION: OR CONDITIONS RELATED TO LEVELS OF C-FOS

i TITLE OF INVENTION: US O8/998,099A

cURRENT APPLICATION NUMBER: 60/037,658

i EARLIER PILING DATE: 1997-01-23

i EARLIER PILING DATE: 1997-01-23

Sequence 9, Application US/08346613
Sequence 9, Application US/08346613
Patent No. 5586264
APPLICANT: GANCR, RICHARD B.
APPLICANT: GANCR, DAVID
TITLE OF INVENTION: TRANSDOMINANT TAT MUTANTS AND USES
TITLE OF INVENTION: THEREOF
WUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS: 18
CORRESPONDENCE ADDRESS: 18
COUNTRY: HOUSTON WHITE & DURKEE
STREET: P.O. BOX 4433
CITY: HOUSTON
STATE: TEXAS
COUNTRY: USA
ZIP: 77210
COMPUTER: ELOPPY DISK
COMPUTER: BAN PC COMPATIBLE
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: WORDERFRET S.1
CURRENT APPLICATION NUMBER: US/08/346,613
APPLICANT: Garcia, Joseph A.
APPLICANT: Harrich, David
TITLE OF INVENTION: Transdominant Tat Mutants and Uses
TITLE OF INVENTION: Thereof
NUMBER OF SEQUENCES: 22
CORRESPONDENCE ADDRESS:
ADDRESSEE: Arnold, White & Durkee
STREET: P.O. Box 4433
